I hereby declare, that the raw measurement files contained in the directories listed above originate from measurements that I personally performed, or in which I directly participated, during my work in the laboratory. The raw measurement values were generated by the corresponding measurement instruments and acquisition software. They were not invented, simulated, or obtained from unrelated measurements and subsequently presented as my own experimental data.

I accept full responsibility for the authenticity, integrity, completeness, and correct attribution of the measurement data listed above. I understand that any intentional falsification, manipulation, or misrepresentation of these data constitutes academic misconduct and may have consequences under the relevant examination and university regulations.
